NINTH ANNUAL MEETING OF CONTRIBUTORS.

Tuesday, January 3d, 1860.

At a meeting of the contributors to the Hospital of the Protestant Episcopal Church in Philadelphia, held this day, pursuant to the charter, at the Office 524 Walnut Street, ISAAC NORRIS, Esq., was called to the Chair, and Dr. KENDERDINE was appointed Secretary.

The Report of the Board of Managers, together with the annual statements and accounts, was presented, and referred to the same Board for publication.

The following gentlemen were elected Managers for a term of three years, to supply the places of those whose terms expired this day :

REV. M. A. DE WOLFE HOWE, D.D.,
REV. RICHARD NEWTON, D.D.,
REV. WM. BACON STEVENS, D.D.,
JOHN BOHLEN,
WILSON C. SWANN, M.D.,
CLAYTON T. PLATT,
EDWARD HARTSHORNE, M.D.,
JOHN WELSH.

On motion,

Resolved, That the contributors congratulate the Board upon the prospect of the realization of their wishes in the speedy erection of a new building; and recommend that the plans of the grounds and building, with the elevation, adopted by the Managers, be engraved and prefixed to the Annual Report, when it shall be printed, together with a description by the architect; and further express their hopes that the community will contribute with renewed interest and alacrity, to the entire completion of the benevolent objects of the Board.

On motion adjourned.

ISAAC NORRIS, *Chairman*.

R. S. KENDERDINE, *Secretary*.

EIGHTH ANNUAL REPORT.

December 29th, 1859.

TO THE CONTRIBUTORS :

In presenting their Eighth Annual Report, the Managers would express their humble gratitude to an ever-merciful Providence for the measure of success which has attended the progress of the Hospital during the past year.

Although the usual restrictions, arising from the limited funds at their disposal, have been encountered, and notwithstanding a temporary threatening of embarrassment, in consequence of the sudden death of an important officer, the practical usefulness of the Institution, as shown by the statistical returns, has steadily increased. The permanent means and appliances for remedial purposes, in the shape of books and instruments, have been materially augmented also; and the heretofore uncertain prospect in regard to the erection of a proper hospital edifice, has been changed at last into a gratifying fulfilment of their long cherished hope.

The whole number of inmates, under treatment in the course of the year, was three hundred and eighty-seven (387), of whom three hundred and sixty-four have entered since the first day of January, 1859.

The daily average number of patients in the house was twenty-six (26), and the average term of residence, about twenty-two days (22). In addition to the patients in the wards, some four thousand (4,000) out-patients have been

prescribed for and attended to in the house, or at their own homes.

We thus find a growth in numbers over that of the previous year, to the extent of fifteen, among the inmates, and over five hundred among the out-patients. Although the average number of daily occupants of the wards was only twenty-six, being one less than in the previous year, the largest number at one time in the house was forty-eight, or twelve more than at any period of the previous year. And, as the average term of residence of twenty-two days was one week shorter than in the preceding year, we may infer that the charity has been administered more nearly to its ultimate capacity than ever before, under the peculiar circumstances of the hospital; and that the rapid succession of cases, due to the large proportion of curable patients entering, has secured the greatest amount of good to the largest number of sufferers, by the speedy return of the most of these temporary invalids to their families in renewed health and usefulness.

The worst cases have, as hitherto, been chiefly the result of the casualties occurring among the working people of the neighboring factories, and the new buildings in course of erection; but among them we have again to notice a considerable proportion coming from the very large laboring population of the district in the midst of which the hospital is placed, as well as a smaller proportion of the victims of the numerous railroads of that quarter of the city.

We refer to these several sources of demand upon the aid afforded by our institution, as we have already, again and again, solely for the purpose of reminding the well disposed in all parts of our Commonwealth, and especially the charitable residents of our city, of the pressing importance of forwarding the progress of a good work which is so manifestly needed on the spot selected as the per-

manent centre of its operations; and we would call upon them with increasing urgency, now that the prospect is so near, of a more inviting object of philanthropy in the completion of an adequate hospital building, not to forget the opportunity which is offered, year by year, to extend a Christian hand toward the support of this place of refuge for their brethren and sisters in distress.

The Committee of the Board appointed to collect additional contributions to the Building Fund, have been enabled by the munificence of a small number of subscribers, to secure a sufficient amount, (\$100,000 with the prospect of considerable addition within the coming year), to justify the commencement of the work of building as soon as the season may permit.

The duty of preparing plans of the new edifice was confided to a "Building Committee," consisting of nine members of the Board, and the Treasurer of the hospital; but not until the entire Board had met in committee of the whole on four successive evenings, and had examined with great care several plans which were gratuitously submitted to them by accomplished architects, and other gentlemen, who had made hospital construction the subject of especial study. Among these plans, that of Mr. Sloan appeared most nearly to accord with the views of a large majority of the managers; and the Building Committee were thereupon authorized to employ Mr. Sloan to mature plans, under their direction, to be finally considered by the Board. These plans have been determined by the Committee, with the efficient aid of Mr. Sloan, and reported to the Board, after a careful study of the whole subject, and a close inquiry into all the questions of theory and practice supposed to be involved in the construction of a general hospital. The result of these various deliberations has been the adoption by the Board, of the plans and elevations recommended by the Committee

and engraved and described in this report as prepared by Mr. Sloan. The latter gentleman, having shown his thorough competency and having, without any previous understanding on the subject, although already virtually engaged, volunteered to undertake the duty of architect on extremely liberal terms, he has been definitely employed for that purpose.

Having gone thus far toward the accomplishment of an enterprise which they have urged as one of paramount necessity for years past, the managers earnestly hope that the contributions which have encouraged them to begin their gratifying task may be speedily increased to such an extent as to enable them not only to finish the work without delay, but to add to the endowment fund of the Institution; in order to provide means for the treatment of the larger number of applicants who are now daily turned away, but who may be readily accommodated in the spacious wards of the contemplated building.

Among the contributions already mentioned, the Managers are happy to acknowledge the gift of ten thousand dollars, presented by a lady of this city, to be appropriated to the erection of a hospital chapel, as a tribute to the memory of a deceased relative. They have also the pleasure to announce the transfer, by another lady of Philadelphia, of a legacy of ten thousand dollars, as an endowment of the Chaplaincy of the Hospital; and the bequest by a third lady (now deceased) of this city, of fifteen thousand dollars, ten thousand of which are included in the additional Building Fund.

Besides these generous donations and bequests, they are indebted to several friends for valuable presents of books and clothing for the patients, and various other articles; and, above all, to Mrs. Thomas D. Mütter, for the gift of the large and excellent collection of surgical instruments, and of a considerable portion of the profes-

sional library belonging to the estate of her late distinguished husband, Dr. Mütter.

Although the year has been marked with signal evidence of increasing prosperity in the general concerns of the Hospital, we have had to lament some serious personal bereavements. The first of these occurred in the sudden death of our late worthy superintendent, Mr. Greatham, in whose decease the Board have lost an efficient and zealous officer and much esteemed coadjutor.

Not many weeks subsequently occurred the equally unexpected departure of our late valued and venerated colleague, Dr. B. S. Janney, one of the oldest and most active of the managers of the Institution. Dr. Janney was a faithful and earnest attendant on the meetings of the Board, and a frequent and always welcome visitor to the Hospital wards; in both places his great professional experience, sound judgment and unaffected kindness, no less than the cordial and Christian interest he manifested in the affairs of the Hospital, had given him a position among his colleagues which must long continue to be remembered with affectionate regret.

The place of Mr. Greatham, so sadly vacated, was taken, *ad interim*, by Dr. Grier, then just finishing his term of service as Resident Physician; and the Managers are under obligations to this gentleman for the manner in which he discharged the duties of his temporary post.

Dr. Grier was released from the voluntary office of acting superintendent by the appointment as superintendent, of Mr. S. R. Knight, formerly an officer of the Frankford Asylum for the Treatment of Persons Deprived of Reason, and well qualified for his present situation by previous experience in analogous establishments.

The current expenses of the year have been less, by some five hundred dollars (\$500), than they were in the

year 1858, being not over five thousand dollars (\$5000), for house expenses, and about two hundred (\$200) for outlays required for indispensable improvements and repairs.

According to this estimate, the average cost of each patient is not over three dollars and thirty cents (\$3 30) per week; which is a reduction on the cost in the last two years. This reduction may be attributed, in part at least, to great economy in providing for the patients' table, although the supplies are as good and abundant as ever, the difference being made up by lower prices and by an increased amount of wholesome vegetable food produced upon the Hospital grounds.

After a faithful and acceptable service of several months, the Rev. Mr. Rudderow was obliged to resign his post of chaplain, and the usual ministrations have been very kindly and efficiently attended to by the Rev. Messrs. Tweedale, of Frankford, and Childs and Hare of the City, who have visited the Hospital, in turns, from day to day.

We refer to the usual statistics for more detailed information in regard to the financial concerns and to the nature of the diseases, their results, and other matters of interest connected with them. And, in conclusion, we take pleasure in returning our thanks to the several attending and resident officers for the intelligent and faithful performance of their various trying but honorable duties.

Having reached the close of the annual term of service, the Managers, in rendering an account of their stewardship to the contributors, would humbly express the hope that, under the Divine blessing, the lapse of another year may enable them to present a still more encouraging report, especially in regard to the progress towards completion of the new Hospital building.

REPORT

OF

CASES TREATED IN 1859.

THE statistics of the Institution show, that during the year 1859, there have been three hundred and sixty-four patients admitted. These, in connection with twenty-three remaining in the Hospital at the time the last report was made, increase the number to three hundred and eighty-seven, (fifteen more than that of 1858.)

Four thousand and fifteen out-door or dispensary cases have been prescribed for and furnished with medicines by the Attending and Resident Physicians, in the Hall of the Hospital, showing an increase of five hundred and fifty-one over those of last year, or more than four times the number that were attended to on the first year (1854,) in which a record was kept of the Dispensary practice.

Of the above number of in-door patients, one hundred and eighty-eight were medical, and one hundred and ninety-nine surgical. Of the Dispensary or out-door cases, two thousand seven hundred and seventy-one were medical, and one thousand two hundred and forty-four surgical.

In the following abstract of the house cases, a number of those in the second and third columns eloped, or were removed by their friends, or were discharged at their own request, before a sufficient time had elapsed for a beneficial result to be obtained from treatment.

DONATIONS RECEIVED BY SUPERINTENDENT.

From Dr. Hunt, 2 trusses and 1 abdominal supporter.
Miss Gertrude Janney, 1 extension dining table.
A large lot of garments for poor patients, from the Dorcas Society, Emanuel Church, Holmesburg.
14 volumes for patient's library, from a member of Christ Church.
Garments from a member of St. Stephen's Church, for poor patients.
Dr. S. Weir Mitchell, a valuable collection of books.
Mrs. T. D. Mütter, 20 cases of valuable surgical instruments, also a donation of books, consisting of 150 volumes, for medical library.
Dr. Kenderdine, 1 volume of Watson's Practice of Medicine by Condie, 1 volume of Bell's Surgery, and towels for wards.
Dr. Edw. Hartshorne, 2 volumes of Miller's Practice of Surgery.
Mr. E. Bender, a valuable lot of splint boards.
A lady, through Dr. J. C. Morris, 1 dozen new shirts for poor patients.
Dr. Hare, a valuable water bed.
Miss B., turkeys and other luxuries for Christmas-day.
Mr. George Blight, a quantity of new posts for boundary fence.

ARCHITECTURAL DESCRIPTION

OF THE

PROPOSED HOSPITAL BUILDING.

THE new hospital building will be located on the western half of the property. This is bounded on the north and east by Huntingdon and Fillmore Streets, and on the south and west by Lehigh Avenue and Front Street. The site has an elevation of fifty-eight feet above high water mark, being ten feet higher than the level of Broad and Chestnut Streets, (the highest point of street grade in the old city,) and is believed to be in other respects well adapted to the requirements of an hospital for the sick and wounded.

The Norman style, modified to suit the purpose and character of the edifice, has been chosen as one of peculiar fitness; without adopting the heaviness characteristic of the early stages of this style, its lighter features are employed in such a manner as to give a pleasing effect.

The outline of the building was suggested by the Parisian *Hôpital Lariboisière*, of European celebrity, in which the conveniences and advantages of the parallel pavilions are clearly demonstrated. The attempt has been made here to adapt this principle to the demands of our own climate, and to various other local circumstances and necessities.

The entire building will consist of a group of five pavilions, of which three only are now to be constructed, designated as the centre building and wings, connected with each other by covered corridors; the length of the entire front, thus formed, being two hundred and fifty-eight feet. The depth of the centre building, including the Chapel, is to be about two hundred and fifty-six feet; that of each wing, two hundred feet; and the space between them on each side of the centre, sixty-three feet.

The connecting corridor above alluded to, is to be fifteen feet wide, and will be continued through the pavilions. On the southern side verandahs are to be placed between the pavilions,

with floors corresponding to those of the buildings, so as to afford a pleasant promenade in suitable weather for convalescent patients.

The rear portion of each wing is to be two stories high with an attic, these stories and attics being entirely occupied with wards for patients. The wards in the first and second stories are intended to contain thirty beds each, and the attics fifteen beds.

The front portions of the wings will be, each, three stories high; and are principally intended for the domestic uses of the establishment, including dining rooms, day rooms, sculleries, nurse's rooms, closets, lifts and stairs. They will also contain two smaller wards, one on the first and one on the second story of each wing, and adjoining the nurse's rooms. The whole number of beds provided for, is therefore eighty-seven, being distributed as follows: sixty in the long wards, twelve in the short wards, and fifteen in the attic. In addition to this, provision is made for mania-a-potu and other exceptional cases, for which seven separate rooms are to be arranged in the basements of the front buildings.

The extra rooms of the centre building will accommodate at least twenty-five patients; so that the capacity of the whole building may be set down as over two hundred beds for all classes and descriptions of patients.

Towers, built for the purpose, and placed on the two external angles of each of the two wings, will contain the wash-room, bath-rooms, water-closets and slop-closets belonging to the long wards. These apartments are to be outside of the two ends of the wards, although adjoining them. A reservoir to contain about fifteen hundred gallons of water will be placed in each of the four towers.

The centre building is to be three stories high with a basement, open area and cellar, the stories being fifteen feet high in the clear; each floor to be on a level with those of the wings.

The kitchen and store-rooms of different kinds, will occupy the basement. The stories above these are intended for administration purposes, and other requirements of the Managers and Officers, in the front portion, and for the operating theatre and patient's rooms in the rear; an attic over the whole being arranged for patients or domestics, as may be most suitable.

On the rear, and adjoining the centre building, is to be the Chapel. This will seat about three hundred and fifty persons on the floor, and about a hundred in the galleries, and may be entered from the wings, through the first and second stories of the centre building. The style of this Chapel will so far deviate from the Norman, as to be properly termed early English merging into the Perpendicular, being an intentional variation from the general style of the edifice.

The fire places of the long wards are to be placed in the four angles, having about six feet breasts with openings four feet high; these to be finished with basket grates suspended above the hearth. The several flues from the fire-places will discharge into vertical shafts behind them at or about a point on a level with the attic floor. These shafts are to be of cylindrical form and three feet diameter. The long wards will be ventilated by flues distributed along their side walls. These are to be of sufficient number, with their openings at different heights, so as to insure complete ventilation at all temperatures; ascending separately to the attic floor they discharge into a longitudinal main duct, which in turn will discharge into the vertical shaft above alluded to. These ducts are to be partitioned in the centre and so constructed as to enlarge from this centre in each direction, in a ratio proportionate to the capacity of the flues, discharging into each corresponding half; and hence, at the points of intersection with these shafts, will equal the aggregate capacity of the ventilating flues. Each of the vertical shafts will contain a coil of steam pipe near its summit or point of connection with the horizontal duct; and at this point it will be partitioned from its lower portion, which will serve as a receptacle of the various ascending pipes required for other purposes. Through these ascending shafts, the pipes of every description will be easily accessible, and the liability to damage from leaks may also be avoided. The coils of steam pipe placed as above-mentioned, together with the connecting pipe, which will extend through the horizontal ducts close to the mouths of the vertical flues, are intended by rarefying the air and thus creating an upward current, to facilitate the ventilation. As a smooth solid surface greatly improves the draft, the ventilating flues and

ventiducts are to be built with open fronts smoothly plastered with hard finish, and afterwards cased with slate.

The whole building is to be warmed by steam. This will be generated by two tubular boilers placed in an out building near one corner of the lot. The kitchen, baths, circulating boilers and the coils within the vertical shafts, are to be supplied from the same source, the whole system being so arranged that the condensed steam will return to the boilers.

One boiler only will be required for summer use, and a separate pipe will be attached to this single boiler for the conveyance of steam to the kitchen, baths and ventilating shafts, independent of those intended for warming purposes. The reservoirs already spoken of will be placed at an elevation above that of the upper floor of the centre building. The connecting pipes of these are to be placed in a trench provided under each pavilion for the reception of all the pipes; an arrangement which, like that of the ascending shafts, renders them readily accessible. The reservoirs will be supplied by a force pump, which, with the machinery in the laundry, will derive its motive power from the boilers described above.

All the exterior walls are intended to be rubble work, of stone selected with reference to its architectural fitness and durability. The roofs will be of slate, that of the Chapel to be varied in form from that on the other portions of the building.

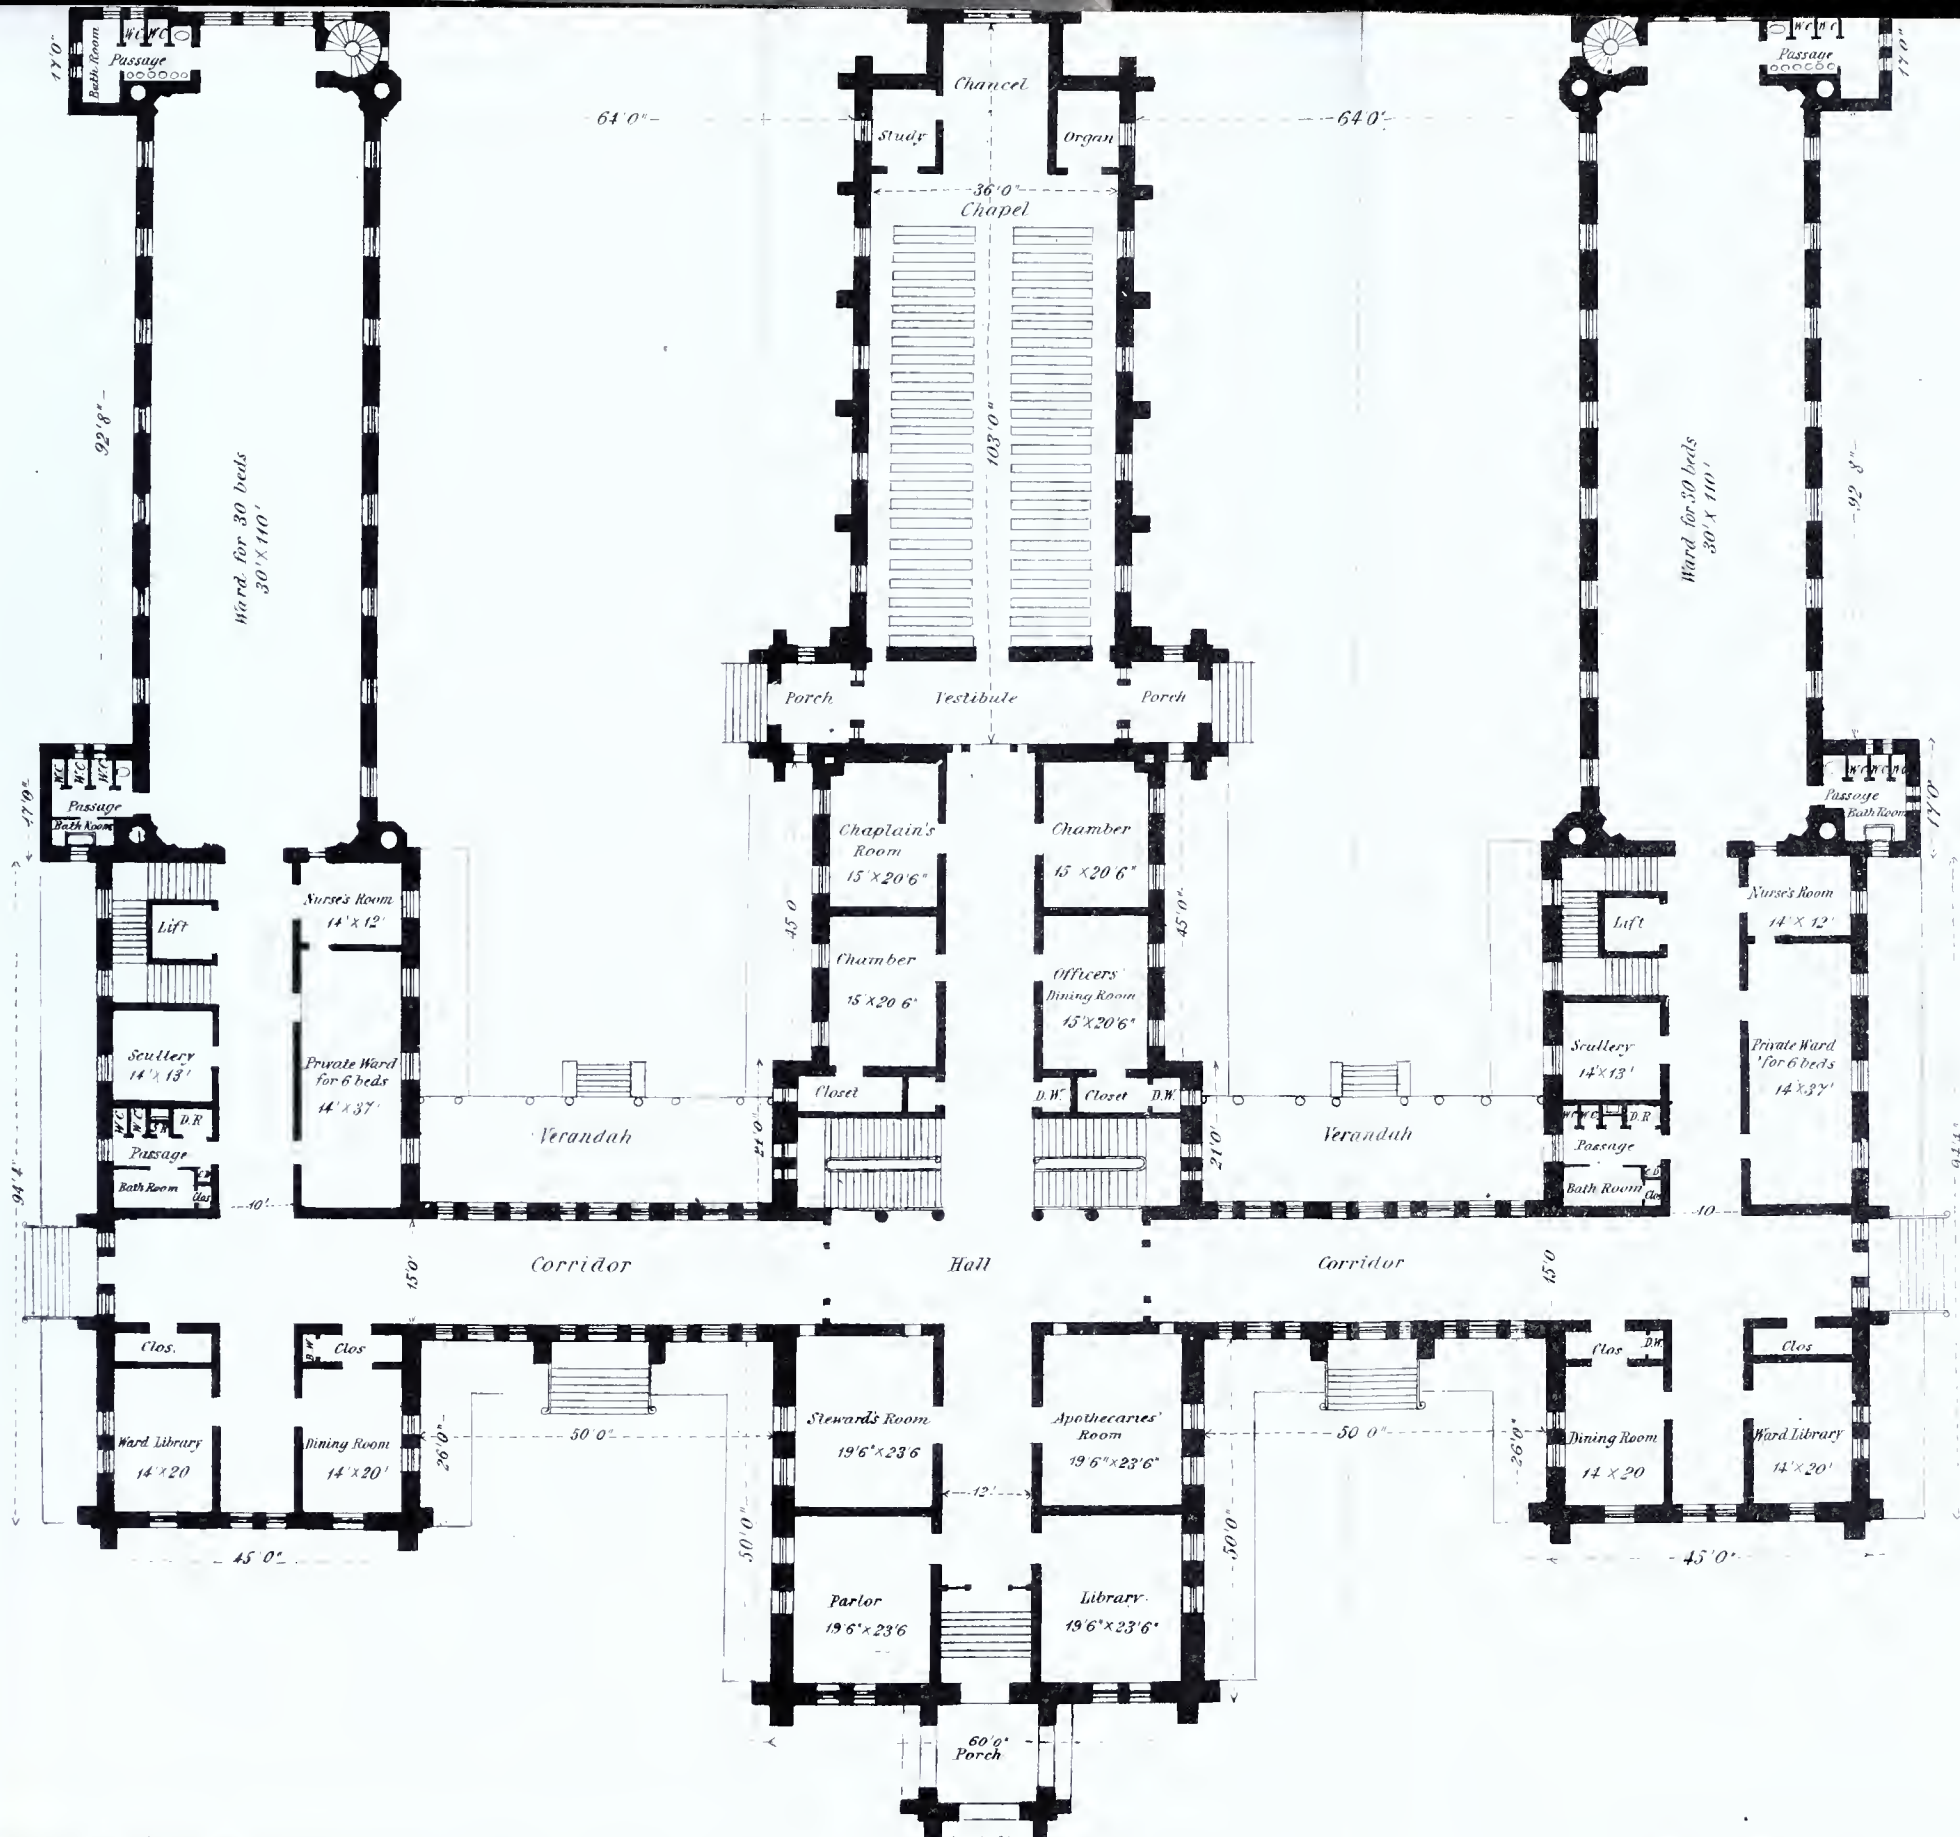

A correct, general idea of the proposed building may be derived from the foregoing brief description, although many important details have been purposely omitted. A full enumeration of these would inconveniently swell this description; and yet all are essential to the completeness of the design and of the interior arrangements.

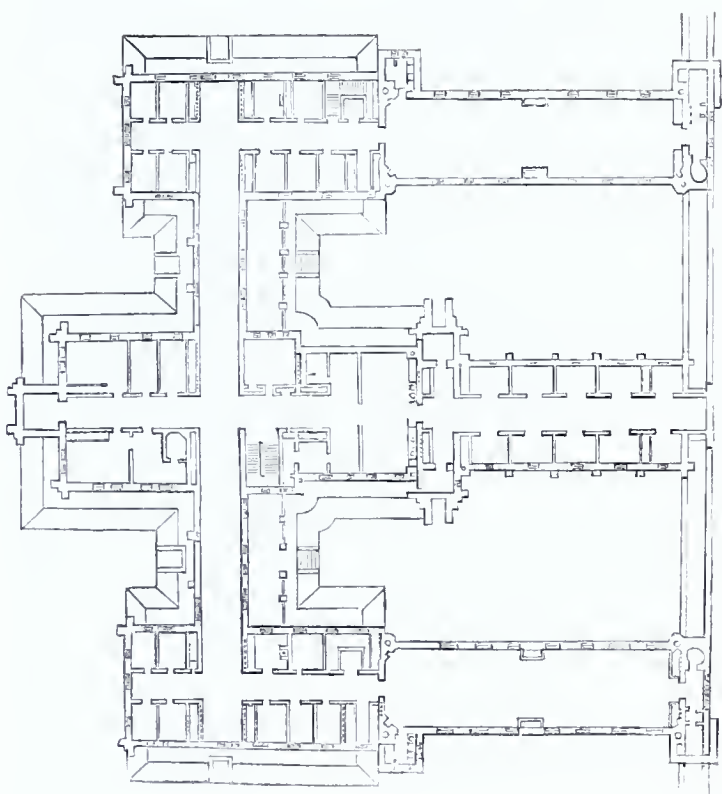

Every precaution has been taken to present a cheerful aspect and to avoid the obstruction or stagnation of air. All the rooms, closets and passages, large and small, as well as the wards and corridors, are so arranged and connected as to be invariably well lighted and ventilated; so that not a dark or close hole or corner will be found in the whole structure. For the same purpose, the wards and ward pavilions, the operating room and the Chapel have all been so placed as to be exposed to the greatest amount of sunshine throughout the day, and to the

free play of prevalent summer winds. In this manner it is hoped that the proposed edifice may combine the largest number of advantages with the fewest disadvantages, in its practical adaptation to the great end in view, of providing the greatest amount of health-restoring influences and the greatest facility of administration, in a general hospital.
